eRx and ChartMaker Clinical

ePrescriptions Module

When you see a patient for a problem, you can review any medications that you prefer to prescribe for this condition. With a mouse click or pen tap, you can ePrescribe the patient prescription, with dispensing and personal instructions, update the active medication list, and add the drug to the patient's history.

The ePrescriptions Module is $79/month/prescriber and shares patient demographics data so there is no double entry of patient information required. It also includes drug interactions, the ability to prescribe for controlled substances (token is required at an additional price) and formulary information, and maintains historical prescription information.

STI's — White Coat of Quality Award

For the sixth consecutive year, Surescripts, the nation's leading health information network, honors 16 health systems and technology vendors with the 2015 White Coat of Quality Award, recognizing their dedication to continually improving data quality and patient safety in e-prescribing.

STI is one of only 16 recipients in the US that received this award.

ChartMaker® Clinical EHR Module

The STI ChartMaker® Clinical module allows the physician and your staff to create customized templates for specific needs and to create progress notes, provide personalized patient handouts, and additional correspondence. The Clinical module is $200/month/provider and includes the ePrescriptions Module.

You can easily select a template(s) and complete an evaluation. Notes can be entered either by mouse, pen, transcription, or spoken directly into the ChartMaker® voice recognition module. Prescriptions or laboratory work is monitored through the system. You can quickly create any required correspondence to a referring physician based upon the information found in the chart. Plus, you can improve your level of chart documentation with our E&M Coding Assistant.

- ◆ Eliminate lost charts. Get out of the office and access your charts from home or other locations
- ◆ Produce legible, compliant chart notes
- ◆ Laboratory and Medical Center Interfaces
- ◆ Patient Portal and Health Portal

Interfaces to Third Party EHRs

If you have an EHR that you currently use check with us to see if we have interfaces for it.

ChartMaker Go has an interface to the ChartMaker Clinical EMR (available at an additional charge). If you use STI's EMR you can also access your patient clinical information on your smartphone or mobile device as well.
